

## How to move photos and videos from internal storage to sd card

[Continue](#)

Amazingly, Huawei has become the second largest maker of smartphones around the globe. That's why it is no wonder to say that more and more users are turning to a device developed by Huawei. But, owning a Huawei smartphone with 16GB or 8GB of internal storage is a serious drawback. Fortunately, Huawei smartphones feature an expandable storage feature. Thus, it means that if your device is running out of storage, then you can simply move some data to the SD card. If your concern is to learn how to move apps to SD card Huawei P9 Lite, then you have come to the right place. In this post, we are going to help you get the job done with ease and in no time. Part 1: Is That Possible to Move Apps to SD Card Huawei? Recently, many users owning a Huawei P9 Lite (Android 7.0) complained that no option is available when they are trying to move apps to their SD card, but the option is available on Huawei P8 Lite with Android 6.0. This scenario raises the obvious question - "Is that possible to move apps to SD card on Huawei smartphone?". Well, the simple answer to the question is that it depends on the software version of your device. As stated by Huawei Support, smartphone starting with Android 7.0 Nougat, moving an app to an SD card is no longer supported. Therefore, if you are a user of Huawei P9 Lite with Android 7.0, then you might don't get the usual option to move apps to the SD card. But, we have good news for you. There is still a way that could work to help you move apps to an SD card on your Huawei P9 Lite smartphone. Continue reading the post to learn it. Part 2: How to Move Apps to SD Card Huawei? Well, if you set the SD card as your default memory location via Settings>Memory>Storage options. But, if no change is witnessed and all info is still being stored to the internal memory, then give a try to the following method that should enable app data to be saved to the SD card. Step 1: On your Huawei phone, go to "Settings">"Apps". Step 2: Now, tap "Advanced (bottom of the screen)">"App Permissions">"Storage". Then, choose the respective app (it should then enable data for selected app saved to the SD card). Step 3: To move data from your device's internal memory to SD card - go to "Tools">"Files">"Local (top-right)">"Internal Storage and/or SD card". This should now give you the option to navigate and migrate data from one to the other (internal memory to SD card or vice versa). Whether you want to perform Huawei transfer photos to SD card, or Huawei transfer apps to SD card, this method should work. Part 3: Backup Apps from Huawei to Computer: What if Huawei P8 Lite move apps to SD card still fail? No worries!! You can always turn to a better solution, which is to backup apps from your Huawei smartphone to the computer by taking the assistance of MobileTrans - Backup. This software is designed to help users take a backup of their smartphone on PC/Mac in no time and without any trouble. To solve your Huawei's limited storage problem, this software comes quite handy. Not only you will make some room on your phone, but you can create a copy of your important data on your computer. On top of all, it can help you backup not only apps but other types of data including photos, videos, music, messages, contacts, etc in one-click. < The key highlights of the software are - > Supports to backup Android as well as iOS devices to a computer. > Supports to transfer 8 different types of data from your Android device to the computer. > Let you perform a selective backup. > No technical knowledge is required to use the software. > No data loss occurs during or after the process. Free Download Free Download safe & secure Considering the features, it is fair to say that MobileTrans - Backup is quite a good deal or alternative to Huawei move photos to SD card. Moreover, it supports a wide range of smartphones available out there. Whether it's a Huawei smartphone or any other phone backup, this software is an ultimate solution to get the job done seamlessly. To learn how to use MobileTrans - Backup to backup apps from Huawei to computer, get the software on your computer and follow the below steps- Step 1: Choose Backup After installing the software, run it and connect your Huawei phone to the computer with the help of a digital cable. Once the software detects your device, select the "Backup&Restore" feature. Step 2: Select file types Now, select the target file types you would like to backup on your smartphone. Free Download Free Download safe & secure Is your Android device low on space? If your phone has a MicroSD card slot, you can use it to expand your space for music, movies or even apps, thanks to the improved SD card features in Android 6.0 Marshmallow. This seems like a big change for Google. After slumming SD card slots in Nexus devices and recommending manufacturers stay away from external storage, Android is now beginning to better support them. Portable vs. Internal Storage RELATED: How to Buy an SD Card: Speed Classes, Sizes, and Capacities Explained There are two ways to use an SD card with your device. In the past, Android has traditionally used all SD cards as portable storage. You can remove the SD card from the device and plug it into your computer or another device and transfer files, like videos, music, and photos, back and forth. Your Android device will continue working properly if you remove it. Starting with Android 6.0 Marshmallow, though, some phones can use SD cards as internal storage as well. In this case, your Android device "adopts" the SD card as part of its internal pool. It'll be treated as part of your internal storage, and Android can install apps to it and save app data to it. In fact, since it's considered internal storage, any type of app can be installed to the SD card-including apps that provide widgets and background processes. Unlike older versions of Android, it doesn't matter whether the developer has disabled the "move to SD card" permission or not. However, when you use an SD card as internal storage, Android formats the SD card in such a way that no other device can read it. Android also expects the adopted SD card to always be present, and won't work quite right if you remove it. This method is useful if your phone doesn't come with very much space to begin with, and you want more space for your apps and files. In general, it's probably most convenient to leave MicroSD cards formatted as portable storage, if you have a small amount of internal storage and desperately need room for more apps and app data, making that microSD card internal storage will allow you to gain some more internal storage. This comes at the cost of flexibility and possibly slower speed, if the card is slower than your device's internal storage. How to Use an SD Card as Portable Storage Let's say you want to use your SD card or flash drive as portable storage-to watch a movie on your device, or to offload photos and videos that are taking up too much space. Insert the card into the microSD slot on your device. You'll see a notification indicating your SD card or USB drive was detected. If it's an SD card, you'll see a "Set Up" button. Our screenshots say "USB drive", but this process works the exact same for SD cards. You can then select "Use as portable storage," and you'll keep all the files on your device. RELATED: How to Use Android 6.0's Built-in File Manager To view the contents of the drive, tap the "Explore" button in the notification that appears afterwards. You can also head to Settings > Storage & USB and tap the name of the drive. This will open Android's new file manager, allowing you to view and manage the files on the drive. You can also use other file manager apps, of course. The "Eject" button allows you to safely remove the drive. How to Adopt a MicroSD Card as Internal Storage If you plan on adopting an SD card as internal storage, you'll want to first ensure you're using a speedy SD card. Not all SD cards are equal, and a less expensive, slower SD card will slow down your apps and phone. It's better to pay a few extra bucks for some speed. When adopting an SD card, Android will test check its speeds and warn you if it's too slow and will negatively impact your performance. To do this, insert the SD card and select "Setup." Choose "Use as internal storage." NOTE: Android will erase the contents of the drive, so be sure you've backed up any data on it. You can then choose to move photos, files, and some apps to the new device, if you like. If not, you can choose to migrate this data later. Head to Settings > Storage & USB, tap the menu button, and select "Migrate data." How to Change Your Mind You'll also see the storage device in the Settings app. Open the Settings app, tap the "Storage & USB" option, and you'll see any external storage devices appear here. To turn a "portable" SD card into internal storage, select the device here, tap the menu button in the top-right corner of your screen, and select "Settings." You can then use the "Format as internal" option to change your mind and adopt the drive as part of your device's internal storage. This will erase the contents of the drive, so be careful and ensure you have everything backed up first. To make an "internal" SD card portable so you can remove it from your device, visit Settings > Storage & USB, tap the device's name, tap the menu button, and tap "Format as portable." This will erase the contents of the SD card, but you'll be able to use it as a portable device afterwards. Android's improved support for MicroSD cards is nice, but you're probably better off with speedy internal storage than a MicroSD card formatted to function as internal storage. That SD card will likely be a bit slower.
